PROFILE

Motivated Computer Science undergraduate student with interests in software development, machine learning, and computer vision. Experienced in working on collaborative software projects involving front-end development, back-end development, feature implementation, as well as debugging. Comfortable working in team environments, contributing ideas, and adapting to new technologies and challenges. Strong problem-solving and communication skills with a continuous interest in expanding technical knowledge and building practical solutions. Currently seeking internship opportunities to gain industry experience and contribute to real-world software and technology projects.

EDUCATION

Bina Nusantara University
Bachelor of Computer Science
Cumulative GPA: 3.74/4.0

Jakarta Barat, Indonesia
Sept 2024 – Jul 2028 (Expected)

WORK AND PROJECT EXPERIENCES

TaskWeaver

Full-Stack Web Application

Feb 2026 - June 2026

- Developed and designed the frontend of a collaborative task management application
- Implemented dark mode, additional pages, and new features to improve the application's functionality and user experience.
- Integrated the frontend and backend, ensuring smooth communication between application components.
- Played a major role in developing the real-time chat feature, enabling users to communicate with each other in real time.
- Identified and resolved bugs while proposing and implementing new ideas to improve the application.

Measles Forecasting in Tropical Countries

Feb 2026 - June 2026

Machine Learning Research Project

- Developed a machine learning project to forecast measles disease trends in tropical countries.
- Implemented and evaluated multiple forecasting and machine learning approaches, including ARIMA, Random Forest, and XGBoost.
- Compared model performance using appropriate evaluation metrics to identify differences in forecasting capabilities.
- Contributed to the development and writing of a research paper based on the study.

S Class Program

April 2026 - June 2026

Game Development

- Selected for the S Class Program, an academic enrichment program offering high-performing students access to additional courses and learning opportunities.
- Chose Game Development as an additional area of study, gaining hands-on experience in game design, 3D asset creation, and development workflows.
- Participated in a 7-Day Game Jam, collaborating on Room to Grow, a game project developed within a limited timeframe.
- Created and designed 3D environmental assets using Blender, including furniture, lamps, televisions, and other interactive/environmental elements.

- Led the Member Support Division and coordinated a team of activists in managing member-related activities and responsibilities.
- Managed and maintained student membership data and records to support effective organization and communication.
- Organized internal events and activities to promote member engagement and community building.
- Moderated and managed the club's online server, ensuring an organized and positive environment for members.
- Coordinated with other divisions to support organization-wide events and initiatives

Volunteer Experience or Leadership

Vice Project Manager

August 2025

Nippon Club Expo

- Assisted in planning and coordinating a club expo event, working closely with the Project Manager and committee members.
- Coordinated with different divisions and team members to ensure tasks and event preparations were completed effectively.
- Helped monitor project progress, solve problems, and coordinate tasks throughout the event preparation process.
- Contributed to the successful execution of the event by supporting decision-making and ensuring effective communication between teams.

Basic Computer Training Volunteer

October 2025 - December 2025

Teaching for Indonesia (TFI), BINUS University

- Taught children basic computer skills and introduced them to Canva and fundamental graphic design concepts.
- Developed simple, beginner-friendly lessons that broke down design tools and concepts into practical activities.
- Guided students through hands-on Canva exercises and provided individual assistance throughout the learning process.

SKILLS

- Programming Languages: Python, C, C++, C#, Java, Pascal
- Frontend Development: React.js, HTML, CSS, JavaScript, TypeScript
- Backend Development: Node.js
- Database: MySQL
- Tools & Technologies: Git, GitHub, VSCode, Docker, PHP, Figma, Blender, Excel
